PREMIUM PANELED TECHNOLOGY

CONTROL ZONE

- The upper section of the sail defines the control characteristics of the sail.
- Lightest materials in the main body for easy handling
- Bordered by a heavier leech material for durability

POWER ZONE

- The mid section generates the sail's power and dictates how easy the sail is to see through
- The Dacron luff panel is softer and has increased stretch characteristics. This creates a more forward pulling profile as the sail inflates.

IMPACT ZONE

- Heavy duty materials are kept lower in the sail, the area traditionally prone to damage with knees and harness hooks.
- Twisted fibres and stronger yarns are combined with thicker films for maximum durability. This extra weight is kept low in the sail so it does not affect the swing weight and lightweight feel of your sail.
